ErgoMove

A step towards good health

Product catalog

The feet are the foundations of the body - and of our expertise.

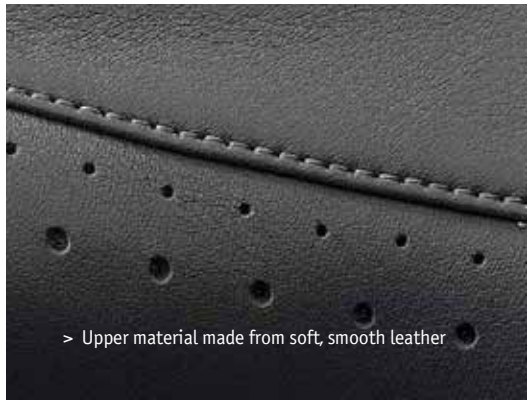
NO TWO FEET ARE THE SAME, AND THEY CHANGE THROUGHOUT THE COURSE OF YOUR LIFE. OUR FEET BECOME MORE DEMANDING AND MORE SENSITIVE AND REQUIRE PARTICULAR CARE.

We have already been helping to provide this care for years in the area of orthopedic orthoses. However, individual feet make individual demands – of both your orthoses and your shoes. This is why we have specifically channeled our orthopedic knowledge into developing the new *ErgoMove* shoes.

What is it that makes *ErgoMove* shoes the best choice for sensitive feet?
It is the functional details, the carefully chosen materials and the constructively coordinated combination of shoes and orthoses that meet the needs of sensitive feet in the best possible way. *ErgoMove* takes precisely these requirements and transforms them into a specially developed concept.

ErgoMove – THE EXCEPTIONAL SHOE FOR EXCEPTIONAL FEET

> A wider foot entry and spacious shoe interior provide for wider or swollen feet



> Upper material made from soft, smooth leather

> Light weight thanks to PU outer sole, so you can be light and sure on your feet

> Prefabricated insole that can be replaced by a customized orthopedic orthosis

Your step towards good health in detail

Inner lining made of breathable, sustainable textile with cushioning over a large area

Pressure relief for the back of the foot through extensive cushioning of the tongue

Reduced risk of pressure through the deliberate avoidance of seams in pressure-sensitive areas of the foot

Edge-free mechanical protection of the toes

Very good hindfoot stability through anatomically shaped and elongated molded heel counter

Cushioned upper edges for the sensitive ankle area

Comfortable toe area designed to fit the foot avoids pressure peaks and gives the forefoot enough freedom of movement

A soft step for sensitive feet

ErgoMove shoes are part of an overall concept made up of shoes, orthoses and compression stockings.

This is the concept of choice for use in cases of:
> FOOT DEFORMITIES WITH A SLIGHT OR MODERATE TENDENCY TO SWELLING
> RHEUMATOID FOOT DEFORMITIES
> DIABETIC FOOT SYNDROME (low risk classes 0 – 2)
> USE OF SOFT CUSHIONED ORTHOSES WITH HIGH STRUCTURAL DEPTH

All *ErgoMove* shoes contain a comfortable cushioned footbed as standard.
This can be replaced by a customized orthopedic orthosis.

Individual foot bedding for sensitive feet

Sensitive feet, such as those of rheumatics or diabetics, require special and individual orthotic care right from the early stages of illness.

GloboTec® Soft Diabetes counteracts potential inappropriate stresses on the feet and the consequences of this in a targeted manner, by:
> EVENLY DISTRIBUTING BODY WEIGHT OVER A LARGE FOOT LOAD SURFACE
> MINIMIZING PRESSURE PEAKS
> SUPPORTING SENSITIVE FEET INDIVIDUALLY AND ORTHOPEDICALLY

Women's models

ErgoMove

Women need shoes that are comfortable yet chic!

ErgoMove SHOES ARE SURE TO IMPRESS AND WILL WIN YOU OVER WITH THEIR UNRIVALED COMFORT.

Timeless design combined with an attractive choice of colors and a slightly raised heel make *ErgoMove* shoes a stylish accessory for women on any occasion.

ErgoMove Care tips

The upper material of the shoe consists of high-quality calfskin.
Leather is characterized by its natural structure, its surface texture and its natural aging process.

WE THEREFORE RECOMMEND:

Regular cleaning and care of the upper material with commercially available leather care products and waterproofing sprays.

Drying and airing after use (please remove the insole or orthopedic orthosis for this).

No exposure to heat sources (e.g. heating appliances or direct sunlight)!

Please use a flexible shoe tree for drying – this helps the shoe to maintain its shape.

The latest technology for the feet

Bodytronic® – Measurement technology from Bauerfeind

Only a product that fits perfectly can fulfill its purpose to your full satisfaction. This is why accurate data form the essential basis for any advisory discussion and subsequent product selection. The Bodytronic® concept involves three fundamental steps:

THE MEASURING PROCESS
Bodytronic® measurement systems determine the relevant body measurements and load situations precisely and quickly using the latest technology.

THE ANALYSIS
The results of the measuring process are presented in graphic form and evaluated.

THE PRODUCT SELECTION
The analyzed measurements are used as a basis for choosing a suitable product combination and carrying out individual adjustments.

All Bodytronic® systems automatically keep a record of the measurement results and can be used as part of the quality management system.
All systems can be found at: www.bauerfeind.com
